

Tableau:

Om de visualisatie nog wat uit te breiden hebben we ook via Tableau gewerkt. We hebben een 6-tal grafieken voorbereid:

De 1^{ste} grafiek vertelt ons per luchthaven het gemiddelde percentage van vluchten tegenover voor Corona (1/02-15/03). Het percentage toont aan hoeveel % van de vluchten nog overgebleven zijn. Hoe hoger hoe beter dus. Als we kort kijken naar de grafiek kunnen we zien dat "Hamilton international" het minst getroffen is en "Santiago international" airport het meest.

Op de 2^{de} grafiek tonen we hetzelfde als *grafiek 1* maar dan per stad, niet per luchthaven. Dit om een mooi geografisch beeld te kunnen weergeven. Zo zien we dat we ook data hebben in Australië en in Zuid-Amerika (Chili) maar die is dus niet zo heel representatief t.o.v. het land. Er zijn 2 mogelijke oorzaken van de lage percentages op die gebieden. Optie 1 is dat het reizen naar deze locaties minder mogelijk was door het beleid van de landen of bijvoorbeeld het sluiten van de grenzen voor toerisme. Optie 2 is dat op deze locaties minder data gegeven is waardoor binnenlandse vluchten minder getoond worden en hierdoor die 2 luchthavens zwaar getroffen lijken omdat die bijvoorbeeld normaal meer buitenlandse vluchten regelen.

Grafiek 2

De 3^{de} grafiek toont de hierboven staande gegevens in een staafdiagram geordend per land en dan van minste impact naar grootste.

Grafiek 3

De volgende grafiek is de meest nuttige, deze kan wel overweldigend zijn maar het toont de relevantste data. Je kan er per maand voor elk vliegveld de percentages zien aan de hand van staafdiagrammen. Zo kan je makkelijk kijken per luchthaven en bijvoorbeeld een tijdlijn interpreteren van de impact op het luchtverkeer.

Grafiek 4

De 5^{de} grafiek is dan weer hetzelfde als de 4^{de} maar met waardes in plaats van staafjes om het overweldigend gevoel wat weg te werken. Het verschil tussen grafiek 4 en 5 zit zich niet enkel in de waardes maar bevat ook de totalen, wat zeker ook handig kan zijn. Dit is eerder een samenvoeging van alle grafieken die we al hebben getoond.

Month per AirportName filtered on the average of PercentOfBaseline

Als laatste nog eens een staafdiagram met per land met het gemiddelde percentage t.o.v. voor Corona.

Grafiek 6

Conclusie die we kunnen trekken uit de bovenstaande grafieken:

De meeste data die we hebben bevindt zich in het Noorden van Amerika en in Canada. Hier zien we dat Corona over het algemeen niet zo'n grote impact heeft gehad ten opzichte van Chili en Australië. Maar omdat we in Chili en Australië slechts elk 1 luchthaven kunnen zien, kan het zijn dat deze data een vertekent beeld schetst. Het kan namelijk zijn dat andere luchthavens in Australië of Zuid-Amerika minder getroffen zijn en dit gewoon de uitersten zijn.
